**MAY 2018**

Your donation goes towards our ground-breaking research such as ProtecT trial which designs to assess the effectiveness, cost-effectiveness and acceptability of treatments for men with localised prostate cancer in a pragmatic randomised controlled trial. It compares three treatments - active monitoring, radical prostatectomy and radical radiotherapy. Clinical research interest is to provide evidence of treatment effectiveness in prostate cancer through large randomized controlled trials.

**Freddie Hamdy - Head of the  
Nuffield Department of Surgery  
at University of Oxford**

**The Chief Investigator of many studies including the ProtecT (Prostate testing for cancer and Treatment) study of case-finding and randomised controlled trial of treatment effectiveness in prostate cancer - the largest of its kind worldwide. Research focuses on management of urological malignancies, in particular prostate and bladder cancer.**
